**Subject:** Re: kik token

---

i sent you this a while ago but it was before you starting engaging with the Coinfund team

there is a standard for ethereum based tokens called ERC20

coinbase is going to support all tokens built on this standard in their exchange and consumer product ([coinbase.com](https://coinbase.com) and mobile apps)

if we build on that it will make it easier for all of the exchanges to support our token

ethereum just had their developer conference in paris this weekend

we had some people there and i've been reading the stuff coming out of it

i think that is the right call for Kik

that's all
